

STOVETOP STEAMER for steaming fabrics, 2010

Astrid Hilger Bennett, www.astridhilgerbennett.com 909 Webster St, Iowa City, IA 52240

Partly based on an illustration from *Design on Fabrics*, Meda Parker Johnson & Glen Kaufman, 1967

PLEASE NOTE: the “wet towel” is actually a kitchen towel rolled diagonally into a long, skinny “rope.” Keeping it wet or damp allows it to conform to the opening better to prevent steam from escaping.

#1: laying out fabric on pellon. I zig-zag several lengths of pellon together to make one long and wide piece. #2: rolling up the fabric in the pellon, always pellon in between.

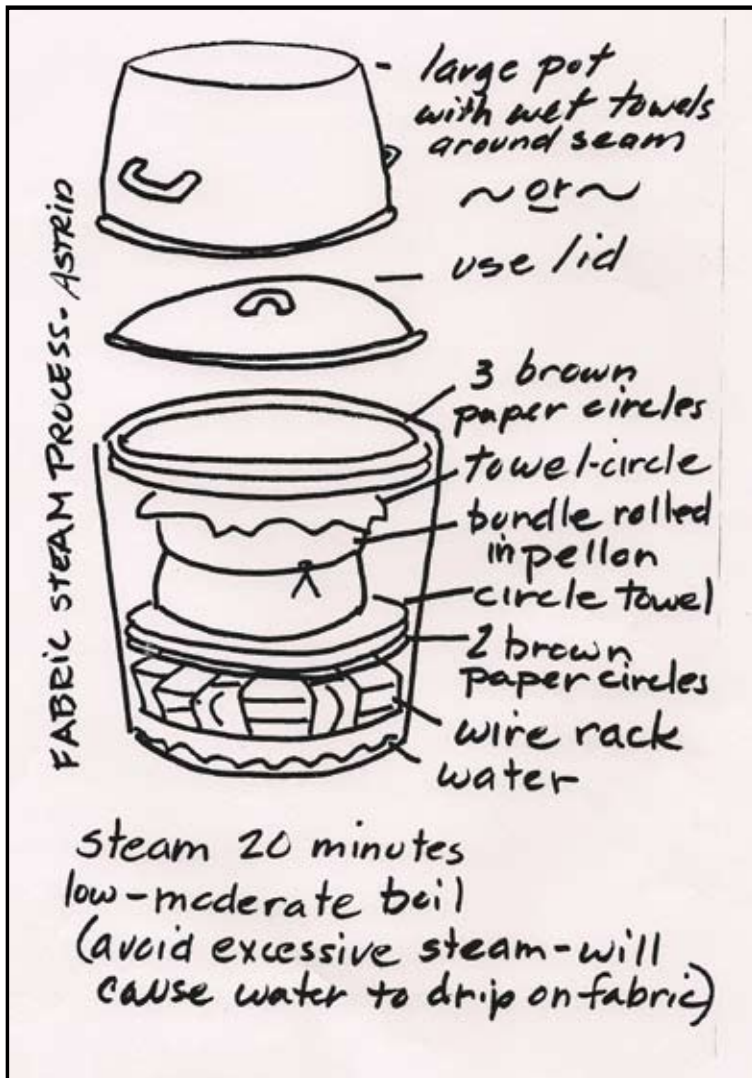

#3 & #4: making the “jelly roll” of rolled fabric in pellon

#5 & #6: fabric roll on towel and 1 paper circle, on rack in pot, then covered with 1 or 2 more towel circles and 2 paper circles before adding cover.

#7 pot on stove, #8 damp towel stuffed in open area to prevent steam from escaping, #9 timer

NOTE: a larger pot would just require the lid, not the inverted second pot.
